

HARSH GANDHARV

WORK EXPERIENCE

Senior Engineer

- Xebia Technology

June 2024 to Present

- Implemented complex state logic and asynchronous actions to improve performance.
- Applied secure authentication methods like JWT for API communication.
- Majorly worked on microservices, building and integrating RESTful APIs using Spring Boot to enhance communication between them.
- Designed and implemented microservices architecture to improve scalability and maintainability.
- Developed microservices for handling specific business functionalities, ensuring modular and efficient code.
- Utilized JPA repositories and Hibernate for efficient database operations within microservices.
- Orchestrated microservices using tools like Kubernetes and Docker for containerization and deployment.
- Ensured seamless communication between microservices using messaging systems like Kafka.
- Implemented unit and integration tests (JUnit, Mockito) to ensure the reliability and stability of microservices.

Full-stack Senior Engineer

- BluePi Consulting Private Limited

April 2023 to June 2024

- Implemented complex state logic and asynchronous actions to improve performance.
- Applied secure authentication methods like JWT for API communication.
- Majorly worked on microservices, building and integrating RESTful APIs using Spring Boot to enhance communication between them.
- Designed and implemented microservices architecture to improve scalability and maintainability.
- Developed microservices for handling specific business functionalities, ensuring modular and efficient code.
- Utilized JPA repositories and Hibernate for efficient database operations within microservices.
- Orchestrated microservices using tools like Kubernetes and Docker for containerization and deployment.
- Ensured seamless communication between microservices using messaging systems like Kafka.
- Implemented unit and integration tests (JUnit, Mockito) to ensure the reliability and stability of microservices.

Project Engineer

- Wipro Technology

August 2021 to April 2023

- Developed client-focused solutions using Java technologies, understanding business requirements and design documents.
- Implemented back-end business layers with Spring and web services.
- Created Java EE components using Spring MVC, Spring Core, Spring Rest, and Spring AOP.
- Built Java applications with Spring framework and JPA repositories, ensuring code quality with JUnit tests.
- Majorly worked on microservices, designing scalable architectures and developing RESTful APIs with Spring Boot.
- Used Kubernetes and Docker for microservices orchestration and deployment.
- Ensured efficient communication between microservices using RabbitMQ or Kafka.
- Optimized microservices for high availability and low latency.

PROJECTS

Jubilant FoodWorks Limited

Spring Boot, ReactJS, Java, JavaScript, SQL, Git, Maven, JUnit, Swagger

- Architected and developed RESTful APIs utilizing Spring Boot, enhancing data processing performance.
- Engineered secure and resilient server-side applications, reducing system downtime through robust error handling and fault tolerance.

- Conducted extensive database optimization, including query tuning and indexing, improving data retrieval efficiency.
- Developed and maintained microservices to enhance scalability and reliability of applications.
- Developed dynamic, user-centric interfaces with ReactJS and implemented responsive web design principles, significantly enhancing the mobile user experience.
- Adopted Agile methodologies to refine development workflows, decreasing project completion time through iterative sprints and continuous integration.

ICAMPS

Spring boot, Java, ReactJs, JavaScript, Maven, JUnit, Git, PostgreSQL

- Utilized schedulers to automate method execution at specified intervals, optimizing task management and ensuring timely updates.
- Integrated multilingual functionality to automatically translate data into nine different languages, enhancing accessibility and user engagement across diverse demographics.
- Implemented data conversion and storage mechanisms to support seamless multilingual content delivery.
- Developed and maintained microservices architecture to enhance scalability and reliability, enabling modular development and deployment of services.
- Built user interfaces using React, incorporating form components to facilitate data input and interaction.
- Designed intuitive and responsive UI elements to enhance user experience and streamline data submission processes.

National Stock Exchange

Spring Boot, Core Java, Git, SQL, Maven, JUnit, Mockito, Swagger

- Implemented CRUD operations to enable Create, Read, Update, and Delete functionalities for managing data entities.
- Utilized Spring Security to enforce authentication and authorization, ensuring secure access to API endpoints.
- Integrated Swagger for API documentation, facilitating comprehensive and interactive documentation for developers.

TECHNICAL SKILLS

Frameworks : Spring Boot, ReactJs

Database : JPA (Java Persistence API), Hibernate, SQL

Web Development: React.js, JavaScript, HTML, CSS

Languages: Core Java, JavaScript

Tools: Maven, Git, Docker

Testing: JUnit, Mockito

Agile Methodology familiarity

EDUCATION HISTORY

Bachelor of Engineerig,	2017-2021
Electronics & Communication Engineering	
Guru Gobind Singh Indraprastha University	-Delhi, India

Kamal Model Sr Sec. School
Senior Secondary School
2015-2016
 -Delhi, India

Kamal Model Sr Sec. School
Secondary School
2013-2014
 -Delhi, India
